Borrrda, Arianne

You have probably met Mikki as the most soft-spoken person in the planet, but I tell you, don't be fooled! Once you get to know this guy who sings very well, you will realize that he has the energy to speak with you for hours and lets you get to know him effortlessly! You will also learn how a hard core biologist like him would actually have a life outside studying and more studying. An admirable characteristic of Mikki is his determination to achieve what he wants. For instance, he can be the most laid-back person when it comes to academics, but he will ultimately do anything in his ability to make up for what he had neglected and excel in it. Amongst all these, one may admire him for his love for his family. For this guy, family always comes first. He is also very caring and compassionate to people which make him one of the most endearing guys you will ever know.

"If perplexities keep pressing "I hope is nearly gone, just bristle up and grit your teeth, and keep on keeping on." – Anonymous

Espiritu, John Michael

You’ve met Koko back in high school – and Koko, to say the least, was boring. But Koko has shown great profundity through the years, and this helped Yanie experience Koko’s wisdom of Keep on keeping on. Koko simply means doing and never stopping. No college life is perfect. There are downfalls for all and Yanie has had her share. But she sticks it out through thick and thin. When her days are bleak, she Kokos – and this has made the woman she is now. Independent and strong-willed, she speeds her way through life, running for honors and managing The GUIDON. This is her life lesson – and one she’s glad to have learned.

Garcia, Jr., Jan Abigail Elizabeth

In order to produce Abby as the final product, it is necessary to gather parts of hard work, intellect, compassion, to be mixed with wholehearted friendship, heated with firm loyalty, and cooled with a deep spirituality. Once Abby is operational, her incomparrable hard work can be seen, not only through her good marks, but also through her extra-curricular commitments. Truly adept in scientific research, it is undeniable that she is the one to turn to for all things related to the laboratory. Her being exceptional is also recognizable in her graciousness to share her knowledge to her co-workers. With God at the center of her life, it is to Him that she offers her successes. A final note, however, crucial in the process of product synthesis is the right combination of everything that is Abby and it is something someone would be fortunate to find only once in a lifetime.

Guerrero, Antoinette Marie

Superlatives may never completely unravel what profundity describes Sas, but she definitely faces life with a mirthful laugh. She is active in a lot of organizations but still has time to have her own compositions. As she excels in both the arts and the sciences, it is hard to figure out how she is still capable of having a life for her exceptional skills are already a marvel in itself. The epitome of Magis and excellence, lack of sleep never hindered her from exhibiting competence. She can finish her work and yours too, even when she claims she barely has a clue. She is that dependable and versatile; count on her to be the one to get the work done! You would think there could be no perfect girl—You’re in for a surprise once you know her.

Sas is the jill-of-all-trades; though a jack-of-all-trades is a master of none, jill, on the other hand, is a master of all.
Misa, Luisa Isabel

Rarely are there people in this world who exude optimism and sincerity like Isa does. For one whose name suggests singularity and loneliness, it is ironic that for most, hearing her name evokes the most beautiful of memories. An individual with inspirational and idealistic qualities, she draws her persona from a rare source of inner strength. She has a clever and deep mind and a talent to make the best of whatever endeavor she undertakes. Standing as a pillar of strength for the times when life takes its toll on others, she is someone who gives continuous guidance and support. She shows people the windows of reality, to see the bigger picture and embrace the world as it really is. She is a person who others care for and envy, think about and laugh with, and most of all love and appreciate.

Nazareno, Luis

Olivares, Carlo Stefano Edgardo

Carlo took up biology to find out if penguins have knees. He still hasn’t found an answer. He has however learned that during a night of heavy drinking, the average person hurls once his blood alcohol concentration reaches 0.20%. He is currently studying to prove this wrong. Applications for grants in his alcohol research have been, to date, unsuccessful.

Other questions he hopes to answer are: Why are yawns contagious? What are earlobes for? And lastly, why do birds sleep standing on one leg?
